## FEDERAL MILK ORDER PRICE AND POOL SUMMARY, OCTOBER

**HIGHLIGHTS.** Handler reports of receipts and utilization under the Federal milk order system for October have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During October about 9.7 billion pounds of milk were received from producers. This volume of milk is 2.5 percent higher than the October 2004 volume. (Taking into account the volume of milk not pooled due to intraorder disadvantageous price relationships, the year-to-year change is +0.8 percent.) About 3.8 billion pounds of producer milk were used in Class I products, unchanged from the previous year. Calendar composition likely had a slightly negative impact on milk used in Class I in 2005 as compared to 2004. The all-market average Class utilization percentages were; Class I = 39%, Class II = 13%, Class III = 38%, and Class IV = 10%. The weighted average statistical uniform price was \$15.27 per cwt., \$0.01 lower than last month, and \$0.06 lower than last year.

<sup>1/</sup> Names in parentheses are the major city in the principal pricing point of the market.

<sup>2/</sup> Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

<sup>3/</sup> Due to a disadvantageous relationship between the intraorder prices and the location adjusted statistical uniform (blend) price in the markets, handlers elected not to pool an estimated 20 million pounds of milk that normally would have been associated with these markets. In October 2004, the estimated not pooled volume of milk was 175 million pounds, occurri8ng in Order Nos. 30 and 126. After adjusting for these not-pooled volumes, the year to year percent change is +0.8.
